Organisation overview

DOG PAW

Category : Non-Profit Organisation

Dog Paw is a non-profit organization established in 2020 during the COVID- 19 lockdown by a group of animal lovers. The organization was initially created to assist abandoned and stray dogs that were struggling to survive during the lockdown. Since then Dog Paw has developed into an organization that supports dog owners who love and care for their dogs but cannot always afford necessary expenses.

The organization is located in Boksburg and currently operates mainly within the east rand , with plans to expand its services to the West rand and reach a wider audience.

Mission:

Dog Paw's Mission is to create support dogs and people who care for them by providing essential resources and assistance to owners who cannot afford adequate care for their dogs.

Vision :

The organization aims to create a community where every dog has access to food shelter basic necessities and appropriate medical care, regardless of its owners financial circumstances.

Product and Services

Dog Paw currently provides support such as :

- Dog food
- Dog pets
- Food and water dishes
- Assistance with veterinary and medical care
- General support and guidance for dog owners
- Assistance to dogs that are abandoned or in need

Target Audience

Their primary target audience is dog owners who have limited or no income but still want to provide proper care for their dogs. The website would also target dog lovers, potential adopters, volunteers and people who would like to donate to the organization.

Website Goals and Objectives

The main goal of the proposed website is to formally introduce Dog Paw to the East Rand , West Rand and And a wider international audience

The website will aim:

- Increase awareness of Dog Paw and its services
- Encourage donations and sponsorship
- Help dog owners find and request assistance
- Educate visitors about responsible dog care
- Attract volunteers and potential supporters
- Promote adoption and responsible pet ownership
- Help the organization expand into the west Rand

key performance indicators [KPI]

Success can be measured through:

- Number of website visitors
- Number of donation inquiries or donations received
- Number of assistance request submitted
- Number of volunteer applications
- Social media engagement generated through website
- Number of people accessing dog care information

Current Website Analysis

Dog Paw Does not currently have an official website. This is a significant weakness because people who discover the organization through Facebook or tiktok may not have one central location where they can learn about its mission, services or how to request assistance.

The organization's existing social media presence is a strength because it allows a Dog Paw to communicate with the public and share information. However, social media platforms alone may not provide enough structured information.

The proposed website will address this by creating a professional and central online platform containing information about the organization, its services, donation options, contact details and educational resources.

Proposed Website Features and Functionality

The website will include:

- home page: introduction Dog Paw And its mission
- About us: history, mission, vision and information about the organization.
- Our services: information about food, birds, dishes, medical assistant and other support
- Request assistance: an online form for owners who need help caring for their dogs
- Donate: information and options for individuals who want to financially support the NPO
- Volunteer: a form for people interested in volunteering
- Dog care information: educational information about feeding, healthcare, hygiene and responsible ownership
- Contact us: contact details and social media links
- Success stories: stories and photographs showing how donations and support have helped dogs

Design and User Experience

The website will use a friendly, welcoming and professional design that reflects Dog Paw focus on animals and community support. Images of dogs will be used to create an emotional connection with visitors while also demonstrating the organization's work.

The navigation will be simple and clear so that the users can quickly find information call, request assistance or donate. Important actions such as donate, request assistance and get involved will be clearly visible.

The website will be mobile- friendly, as many users are likely to access it through smartphones and social media links. The overall design will use readable typography, clear headings, accessible buttons and consistent branding to create a positive user experience.

Technical requirements

7. Technical Requirements

The A Dog Paw website will be developed as a responsive website that can be accessed on computers, tablets and mobile phones. The website will provide information about the organisation, its services, ways to request assistance, contact information and opportunities for donations and volunteering.

7.1 Programming Languages and Tools

The following technologies will be used:

- HTML5 – to create the structure and content of the website.
- CSS3 – to design the layout, colours, fonts and overall appearance of the website.
- JavaScript – to add basic interactive features and functionality.
- Visual Studio Code – to write and manage the website code.
- GitHub – to store, manage and track changes to the website project.
- Responsive Web Design – to ensure the website works correctly on mobile phones, tablets and computers.

7.2 Website Requirements

The website will include:

- A minimum of six interconnected web pages.
- A consistent navigation menu.
- Responsive design.
- A contact form.
- An enquiry form for people requesting assistance.
- Social media links, including Facebook and TikTok.
- Images of dogs and dog-care activities.
- Information about donations and volunteering.
- A map showing the organisation's locations/service areas.
- Clear calls-to-action such as Donate, Get Help and Get Involved.
- Basic accessibility features, including readable text and suitable colour contrast.

Timeline and milestones

Phase	Timeline	Activities	Milestone
1. research and planning	week 1	Research DOG PAW , identify the target audience, analyze similar NPO websites, and establish website requirements	project requirements and website plan completed
2. content and information architecture	Week 1	organize website content and determine the structure of pages such as home, about us, services, get help, donate and contact us	sitemap and content structure approved
3. Wireframes and UI design	week 1	create wire frames and develop the visual design using the Dog Paw Blue or stomach color palette	website wireframes and usual design completed
4. website development	week 2-3	build the website pages, navigation, buttons, forms and responsive layouts. Add images, text and branding.	Functional website prototype completed
5. functionality and integration	week 3	implement contact, assistant- request, donation and volunteer forms. Connect social media links and other required functionality.	Website functionality implemented
6. testing and refinement	week 3	test the website on mobile phones tablets and computers. Check navigation, links, forms, images, spelling and accessibility.	Test edge website with identified issues corrected
7. final review and launch	week 4	present the completed website to the organization,	final website approved and ready for launch

		make final changes and prepare the website for publication
